Coupa

Agentic AI for Finance

Auditoria.AI Agentic AI SmartBots Supercharge Coupa AP Processing

Request A Demo

Auditoria.AI brings intelligent automation to Coupa customers by transforming the account payable process. Built for finance teams, SmartVendor AP Invoices and AP Helpdesk digitize, classify, and process vendor invoices at scale—eliminating inefficiencies and accelerating accounts payable operations, integrating seamlessly with Coupa and the Coupa Supplier Portal* (CSP). Agentic AI-enabled SmartBots automate redundant and manual monitoring and responding to communications from the shared AP email box.

Whether you're dealing with high-volume invoice intake or struggling with inbox management, Auditoria's SmartBots act as intelligent finance teammates, delivering fast, accurate results with minimal human intervention.

AUDITORIA.

* Roadmap

Key Benefits

Accelerate AP Workflows
Digitize and process invoices in real-time—no templates or manual keying required.

Reduce Manual Work
Automate invoice extraction, validation, and exception handling, saving thousands of hours annually.

Seamless Coupa Integration
SmartBots connect directly to Coupa's Invoicing platform using secure APIs and prebuilt connectors.

Improve Accuracy and Compliance
Source-traced data and explainable AI ensure every decision is auditable and trustworthy.

AI-Enabled Agents Built With Advanced Technology

Generative Artificial Intelligence

Purpose-built for finance with NLP, AI, and ML, SmartBots act as a system of engagement. Adoption and execution are accelerated through business terminology and intent detection for finance processes. GenAI and machine learning technology delivers 70% workload reduction for AR, AP, and procurement teams.

Large and Small Language Models to Optimize Finance Operations

Auditoria's proprietary, patented small language model (SLM) offering combines LLM capabilities with finance-specialized data that allows for fine-tuned and customized finance context.
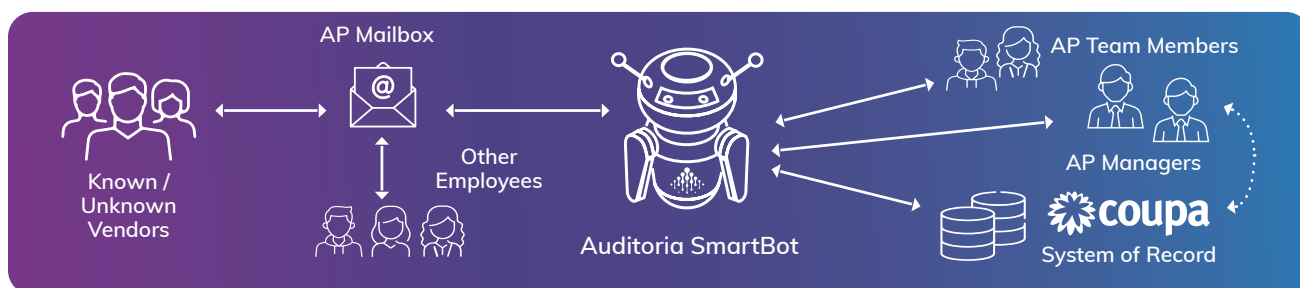

This specialty-built SLM comprising seven billion+ tokens is designed to understand and generate human-like finance text, but is smaller in scale and yields more accurate results to radically improve outputs and workflows.

HITL Collaborative Mode

Human in the Loop (HITL) functionality gives users the power to review and modify SmartBot actions, fine-tuning how the AI processes data and communicates with stakeholders.

This Collaborative Mode builds trust through hands-on engagement with the AI's decision-making process to improve the handling and recovery of exceptions.

With established confidence and deepened trust, users switch to autonomous mode for AI to control workflows without human intervention.

Explainability with AI Power

By allowing human collaboration, risks associated with potential errors or omissions are minimized, building trust over time. This synergy between human insight and AI capability marks a significant advancement in streamlining finance office operations.

AI-Enable AP Automation Agents Integrated with Coupa

AP Invoices

AP Invoices **expedites invoice data extraction** from verified vendors. Invoice items are parsed, **POs and contracts are checked** and matched through Coupa, and a vendor invoice **record is created.** Confidence indicators provide visibility into accuracy, and SmartBots **flag for review** when the confidence is low while high confidence extractions can be **processed straight-through**.

Benefits

- **Extract greater volumes** of invoices more quickly and accurately for Coupa processing.
- **Gain maximum visibility** into true accounts payable balances and expected spend levels at any time.
- **Refocus AP efforts** to review extracted invoice data exceptions.
- **Reduce fraud and redundancy** with duplication detection and suspicious activity flagging.

AP Helpdesk

AP Helpdesk **automates vendor email processing** and request fulfillment. AP shared inbox emails are **read and classified** using machine learning that deciphers the context and message intent. Responses are composed for up to 90% of the inbox, shifting team member **focus to more impactful work.**

Benefits

- **Save time and increase productivity** by eliminating the need to login to shared inboxes.
- **Deliver consistent, accelerated turnaround** of email-originated AP requests and inquiries.
- **Reduce operational expenditure** by streamlining workflows for manually executed and auto-processed AP tasks.
- **Simplify AP communication** and improve vendor satisfaction.

Why Auditoria.AI + Coupa

- **Built specifically for finance**
- **No templates or rules required**
- **70–80% automation potential**

- **Improved invoice accuracy and speed**
- **Rapid deployment (<60 days)**
- **Works across ERP ecosystems**
