Auditoria®
AP Invoices
Automate Vendor Invoice Data Extraction

Ventures Partner workday.

Responsible AI Solution workday.

GAIN VISIBILITY • IMPROVE DATA ACCURACY • PROCESS VOLUMES QUICKLY

Auditoria's AP Invoices increases speed, accuracy, and efficiency in the finance office using agentic AI-enabled SmartBots to automate redundant and manual data extraction from vendor invoices. Data gathered from interactions is captured in reports that allow analysis and insights to derive greater visibility into cash position.

SmartBots extract the invoice data in real-time for maximum visibility into true accounts payable balances and expected spend levels at any time.

Invoices from existing vendors are parsed, POs and contracts are checked and matched, and a **vendor invoice record is created** so that AP personnel process greater volumes of invoices more accurately.

Refocus AP efforts to review extracted invoice data exceptions and pay invoices on time to **keep more cash on hand and avoid late fees.**

WHAT'S SO "SMART" ABOUT AUDITORIA?

Auditoria® SmartBots are discrete, pre-packaged, purpose-built accounting applications that use agentic AI to perform a wide range of critical finance office functions, automatically. SmartBots act as agentic AI TeamMates that engage with Workday, other systems of record, shared inboxes, and key stakeholders. SmartBots capture actions and hand-off to humans using workflows to escalate when intervention is needed. Purpose-built for finance, SmartBots offer full-featured data invoice extraction and record creation.

"Artificial intelligence (AI), smart workflows, and analytics unlock new levels of automation to drive efficiencies and savings."

— *Micky Keck, Director Analyst - Gartner*

Ventures Partner workday.   **Certified Integration** workday.

Auditoria is a Workday Ventures Partner, with access to Workday's extensive experience, market know-how, and global reach in the enterprise space. Together, we are helping finance teams work more effectively as companies move toward digital transformation and automation, allowing the office of the CFO to focus on strategy and business initiatives rather than on error-prone manual tasks.

HOW IT WORKS

DOCUMENT AND DATA FETCHING

- With advanced cognitive OCR and Computer Vision, SmartBots extract information from structured and unstructured invoices to streamline data extraction and input activities.
    - PDFs, Image files, Excel, and Word
- Approval workflows ensure data written to the system of record is checked and approved before being uploaded to verify and improve accuracy.

CONFIDENCE INDICATION DRIVERS

- An embedded confidence-driven mechanism buckets the extraction output into high or low confidence scores.
- Over time, the technology learns user input, and the buckets shift to more high confidence iterations and fewer low confidence iterations.
- SmartBots flag for review when the confidence is low, and high confidence extractions are able to execute straight-through processing.

AUTOMATED INVOICE CODING

- SmartBots check that extracted Purchase Orders are in the system record, with the same open-status vendor. SmartBots compare the lines on the PO to the invoice using an exact match on the description to link the respective lines.
- If vendor bills are not description matched, SmartBots use lines such as quantity or rate, to match the invoice rate to the PO line rate, or service lines where the bill line matches the PO line amount exactly.
- Matching is escalated to humans if no PO is found on the vendor bill, the extracted PO is not in the SOR, the extracted PO is for a different vendor, or the extracted PO has no balance.
- SmartBots also use contract details to auto populate fields on an invoice such as GL account, cost center, and spend category. Contract details are matched against contract data in the SOR. Contract lines are also matched against the invoice lines. Coding fields from the contract automatically populate in Auditoria.

HOW WE HELP

LARGE AND SMALL LANGUAGE MODELS TO OPTIMIZE FINANCE OPERATIONS

Auditoria's proprietary, patented small language model (SLM) offering combines LLM capabilities with finance-specialized data that allows for fine-tuned and customized finance context. This specially built SLM comprising three billion tokens designed to understand and generate human-like finance text but is smaller in scale and yields more accurate results to radically improve outputs and workflows.

RAPID TIME TO VALUE

See value in days, not weeks or months, using automation with minimal IT dependence, thanks to pre-built integrations with leading ERP, collaboration, and email systems.

IMPROVED COMPLIANCE AND GOVERNANCE

Deliver accurate, complete, and timely financial reporting to shareholders, investors, and auditors by ensuring that data is always audit-ready.

SECURITY AND PEACE OF MIND

Remove the stress and friction in the finance function with a secure and reliable system of unparalleled financial precision that captures an audit trail of activities in the system.
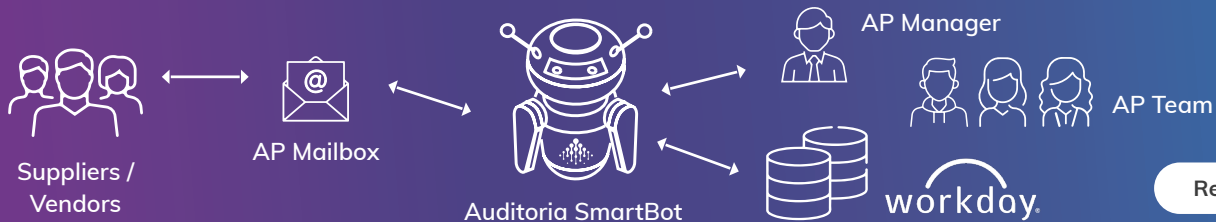

SPEED AND VELOCITY

Give finance teams the ability to move at lightning speed, accomplishing more than ever thought possible, faster than ever imagined.

ERROR-FREE TASK EXECUTION

Remove human-introduced errors from the equation to ensure that transactions reconcile across systems of record.

Auditoria's AI-enabled agents called SmartBots provide a system of engagement, utilizing the AP inbox and Workday to automate invoice data extraction and improve AP functions and cash performance.

Suppliers / Vendors → AP Mailbox → Auditoria SmartBot → AP Manager / AP Team / workday.
